

# TPP and impact on medicine, vaccines, biological products and health system

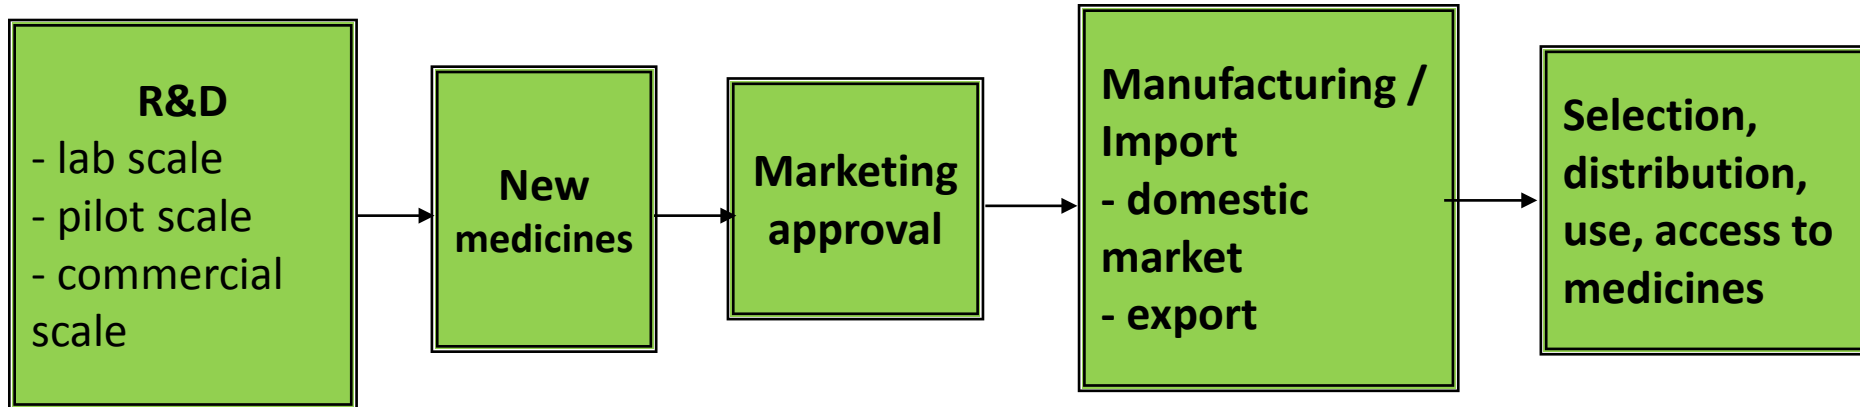

ITH Conference 2016  
9 August, 2016  
Holiday Inn Bangkok Silom

Dr Pathom Sawanpanyalert, MD DrPH  
Senior Expert in Health Promotion (Public Health  
Physician)  
Health Technical Office, MOPH

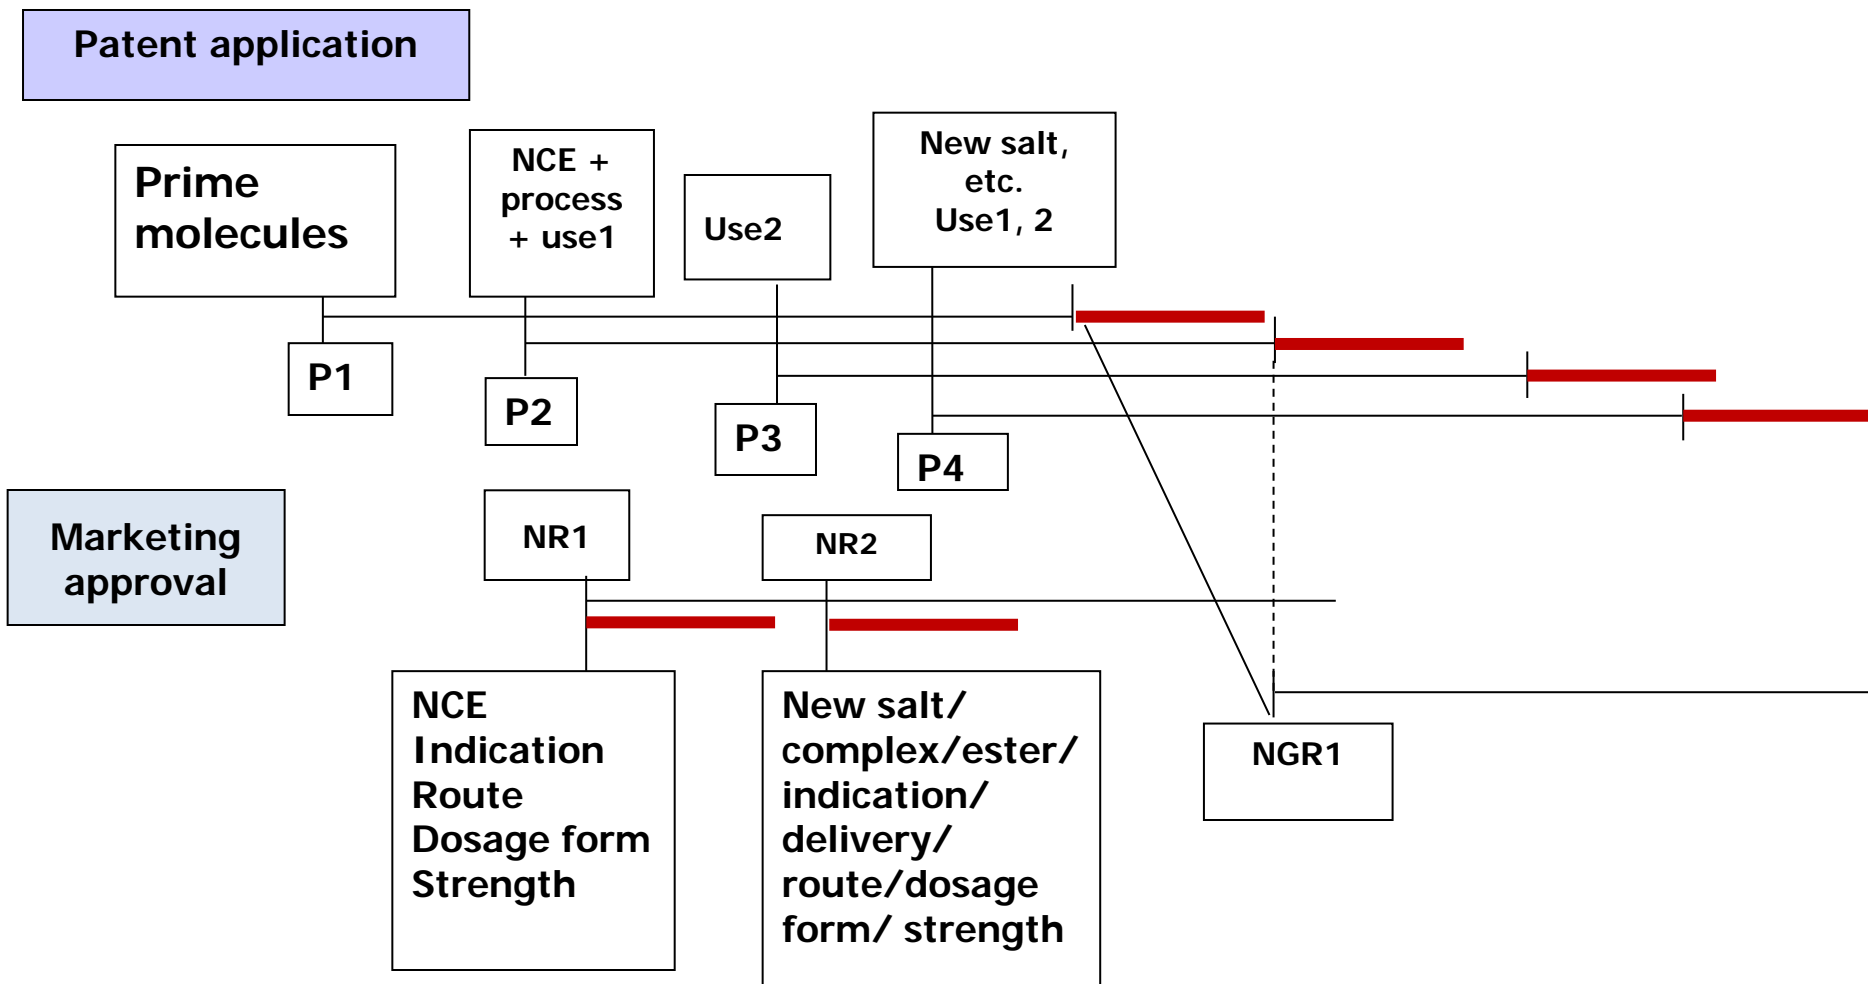

## What we have done and what we found, so far

- MOPH had conducted a primary analysis of the TPP agreement since the agreement was launched
- Findings:
  - text in many chapters is related to the medicines and the health system along the value chain
  - the implication depends on the legal interpretation
  - the magnitude of the impact was assessed on the ground of the country's current health system

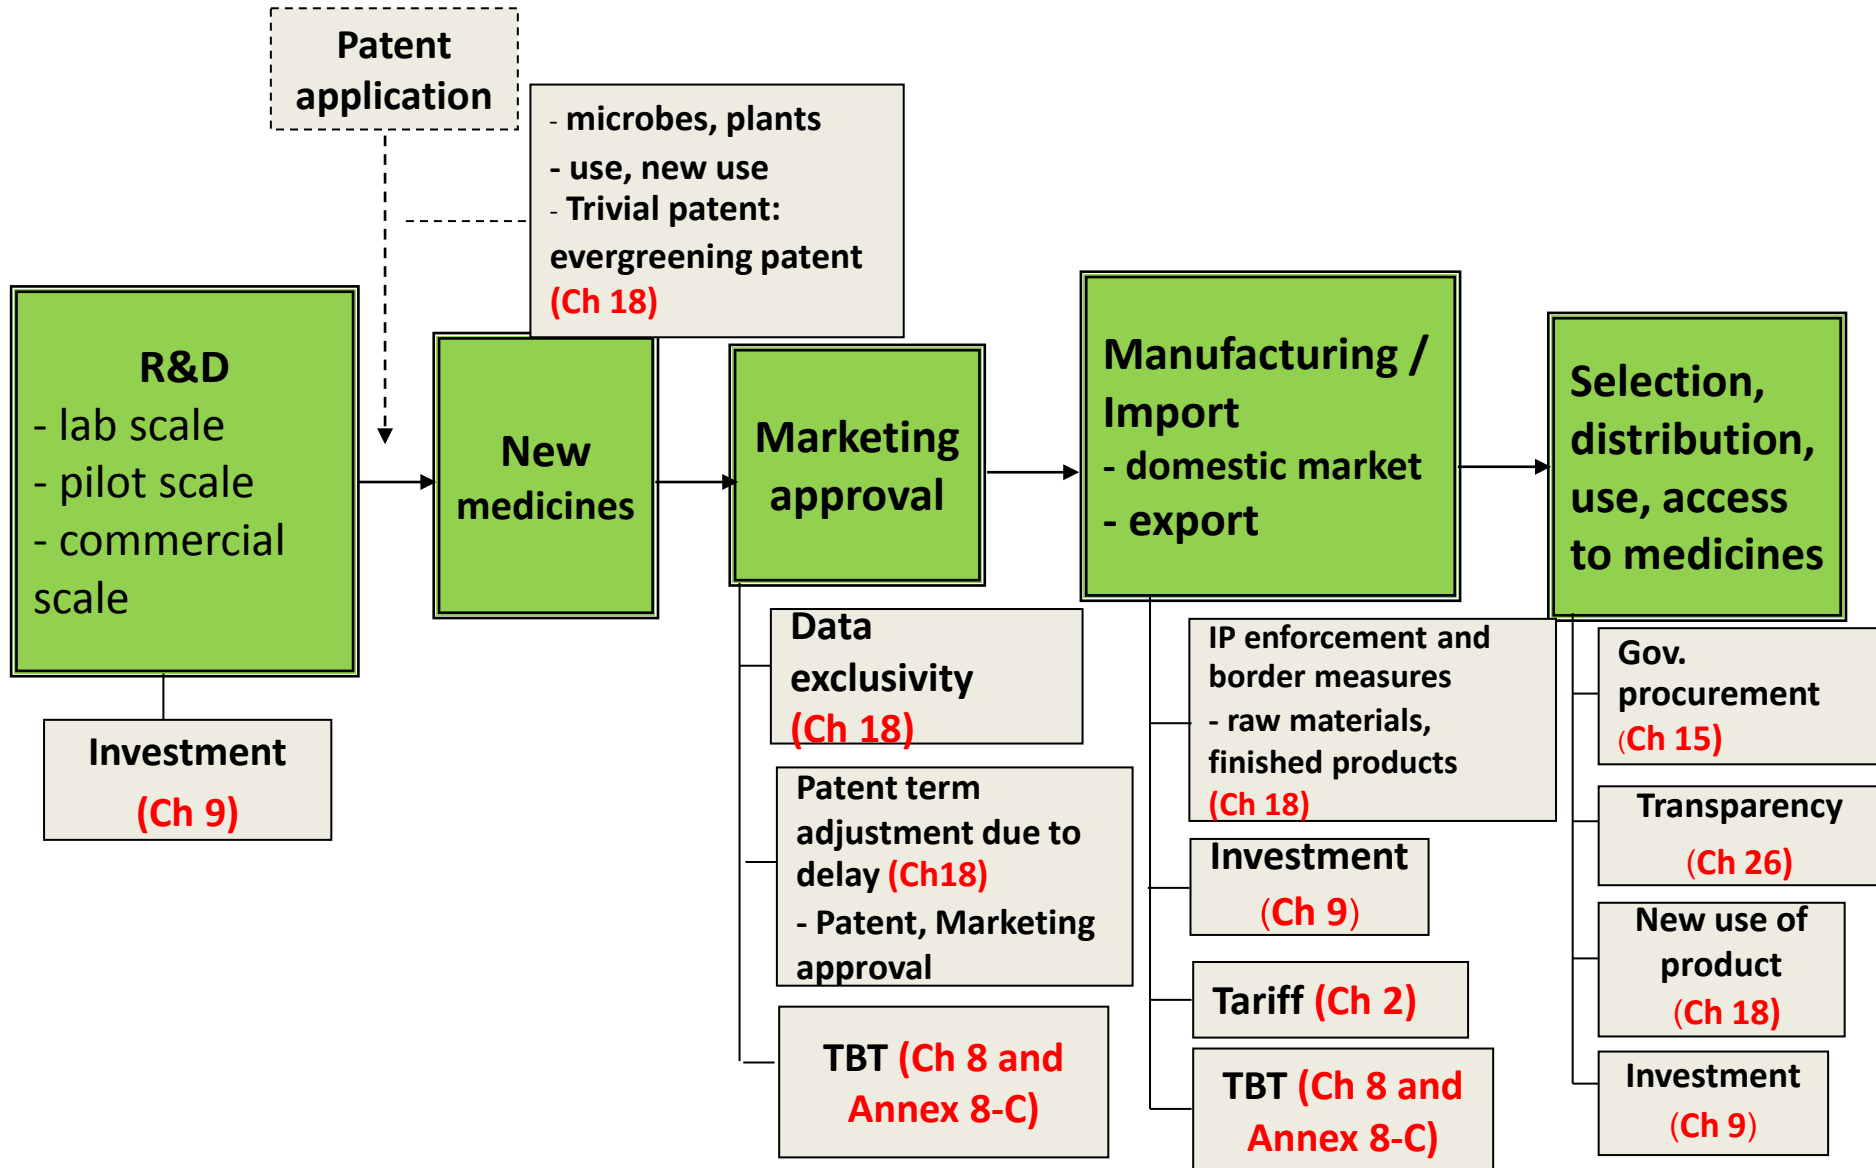

# Value chain of medicines

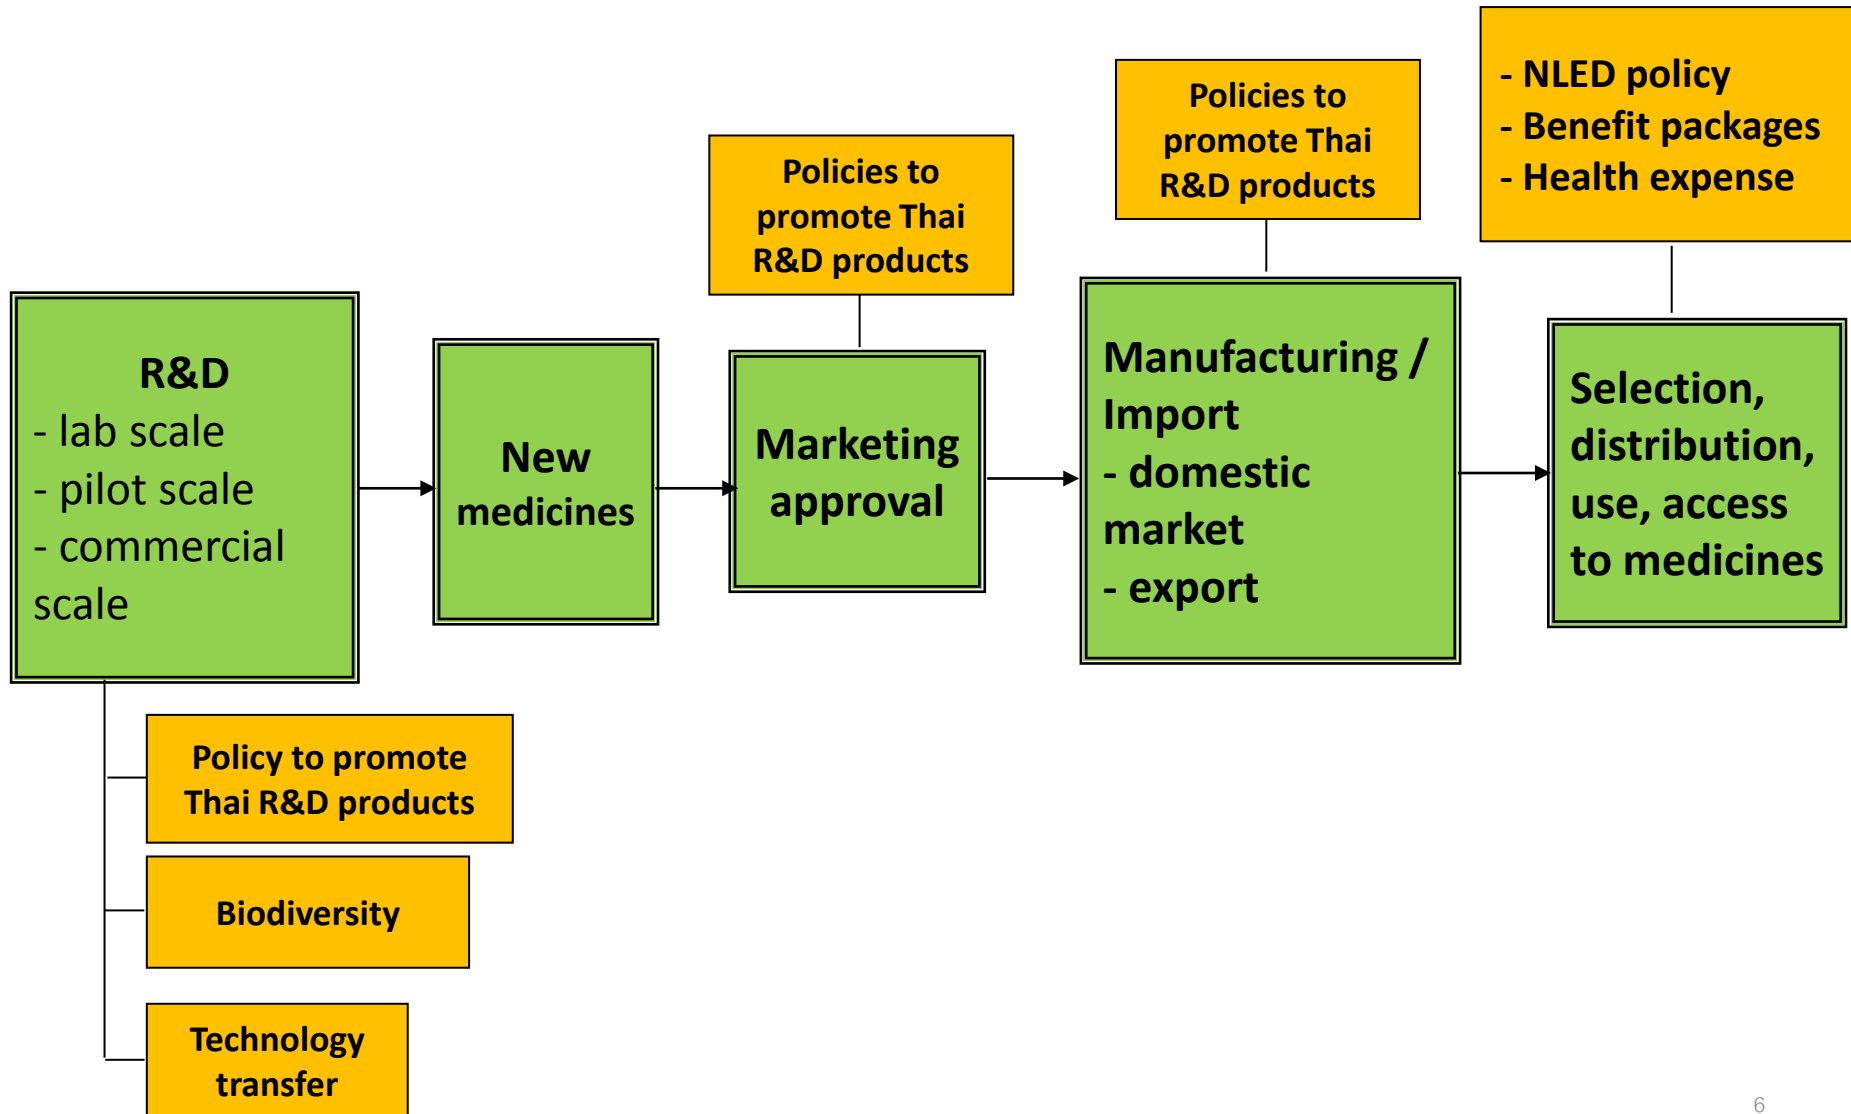

# Process and timeline of patent application and marketing approval

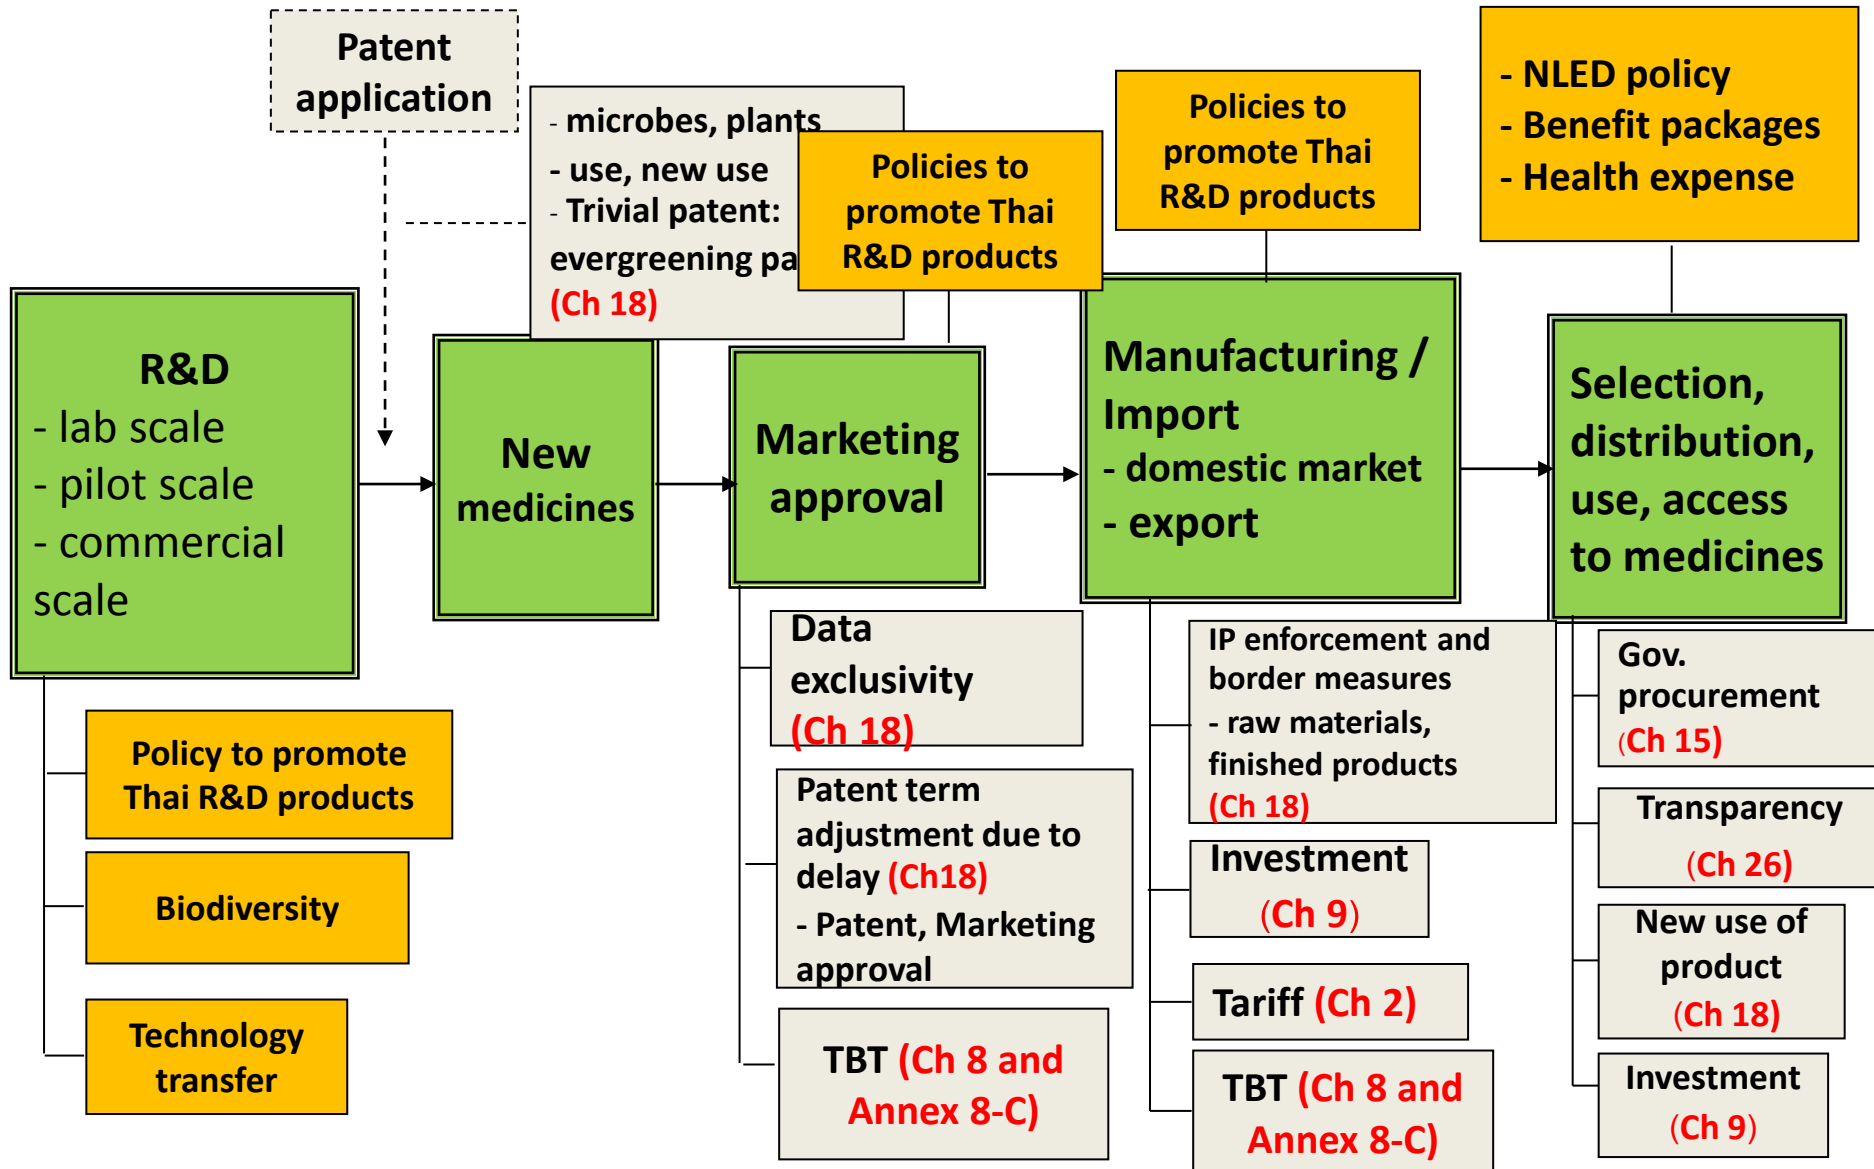

# Chapters in TPP related to medicines

# National policies/ measures

# Interfaces between TPP and national policies/ measures

## What's next?

- How big is the magnitude?
- If Thailand would agree to TPP:
  - How to mitigate the negative effects?
  - Which issues are negotiable?
  - How to balance between protection of private rights and consumer protection and health benefits of the people?

Thank you
